

# Database: Introduction

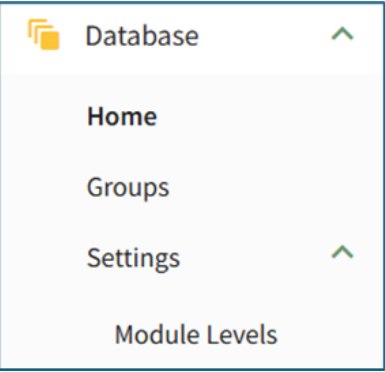

- [Database Module Summary](#)

# Database Module Summary

The Database Module allows for the creation, viewing, management and storage of custom databases. Databases can integrate with other KAStack Modules, as well as other databases in the Database Module.

## Integrates With

| Essential Suite Modules | Primary Suite Modules                                                             | Advanced Suite Modules | Specialized Suite Modules |
|-------------------------|-----------------------------------------------------------------------------------|------------------------|---------------------------|
| Accounts                | Assets                                                                            | Database               | Attendance                |
| Calendar                | Actions                                                                           | Forms                  | Dispatch**                |
| Comments                | Courses                                                                           | Grid                   | Finance                   |
| Communications          | Documents                                                                         | Integrations           | Inventory                 |
| Dashboard               | People                                                                            |                        | Kanban                    |
| Site Settings           | Reports                                                                           |                        | Remotes                   |
| Tags                    | **Integration between Database and Dispatch is limited to the Locations Database. |                        |                           |

There are three pages in the Database Module that can be accessed from the Main Menu: Home Page, Groups Page, and Settings Page.

| Database Module Page Summaries Table |                                                                                                              |
|--------------------------------------|--------------------------------------------------------------------------------------------------------------|
| Page                                 | Explanation                                                                                                  |
| <a href="#">Home Page</a>            | The Home Page contains the Database Table, where all existing databases built within your system are stored. |

|                               |                                                                                                                                             |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">Groups Page</a>   | The Groups Page in the Database Module is utilized for organization function and allows databases to be grouped together for efficiency.    |
| <a href="#">Settings Page</a> | The Settings Page allows the user to customize and designate permissions for the Database Module. It contains the Manage Module Level Page. |

The User Manual for the Database Module is updated through Version 11.12.
