

Create an External Link within Integrations

To create a new external link, go to the Setup Page under External Links in the Integration Module. Select the “New External Link” button

This opens the Add Link Modal where the URL Link and External Link Title can be input. Both are required fields. Ensure that the full URL is input in the URL field, beginning with “https://”.

Select who can view the external link from the dropdown menu. Permission can be assigned to individuals, certification roles, access levels, or to Everyone. If a URL Link can be embedded within KAStrack, a preview will show in the Add Link Modal. If the URL Link cannot be embedded within KAStrack, the preview will show that there was an issue connecting.
