

Edit Existing Pages

On the Course Overview Page, all pages of the course are displayed with previews of their page elements.

Click and drag the handle in the top left to move the page, click the trashcan on the top right to delete the page, or click the page and pencil icon to edit.

To edit a slide after it is created, simply click on the slide, and the “Edit Custom Content” page will re-open to permit this.

“Preview Page (opens in new tab)” allows the user to visually see how a specific page in the course will reappear.

“< Previous Page” and “Next Page >” allows the user to navigate between the pages of the course.

“Close This Page and Add New Page” closes the current page and opens the “New Page” modal to create a new page.

“Test Course (opens in new window)” allows the course creator to go through the course without it being attached to a certification and without impacting their course stats.

“Back to Course Overview” consolidates slides onto pages and redirects the user to the course homepage.

Click “Close This Page and Add New Page” will activate the “New Page” modal.

Revision #2
