

# Give Default Permission to View all Dispatch Incidents

To give individuals, certification roles or access levels the ability to view all dispatch incidents, go to the Dispatch Module Settings Page Defaults Tab.

The screenshot shows the 'Settings' page with the 'Defaults' tab selected. Under the 'View Incidents' section, a dropdown menu is open, displaying 'Mitzi Orkus (morkus) x'. Below the dropdown are 'Save' and 'Cancel' buttons.

Placing your cursor in the text box opens a dropdown menu with all individuals users, certification roles, and access levels. Multiple selections can be made. If you would like all KAStrack users to have permission to view dispatch incidents, select “Everyone” as an option.

Select the “Save” button and a confirmation modal states, “Defaults Have Been Saved.”
