

# Place Databases into Groups

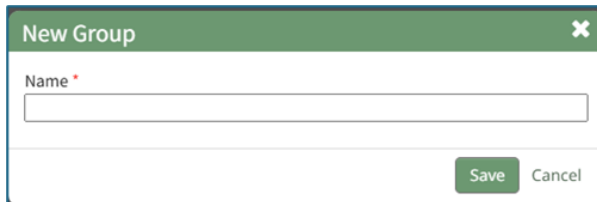

In order for databases to be placed into groups, groups have to be created first.

## How To: Add a Database Group

To add a database group, go to the Groups Page of the Database Module.

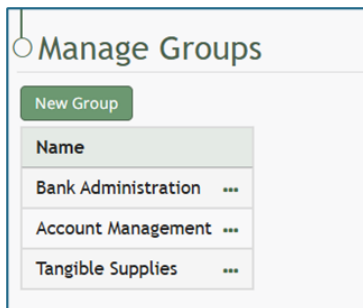

Select the “New Group” button opening the New Group Modal.

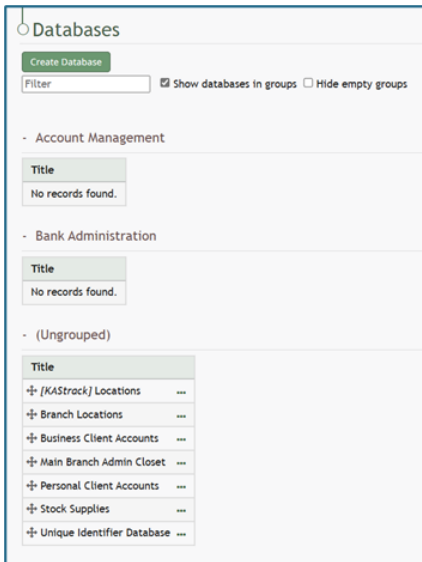

The screenshot shows a modal window titled 'New Group' with a close button (X) in the top right corner. Inside the modal, there is a text input field labeled 'Name' with a red asterisk indicating it is required. Below the input field, there are two buttons: 'Save' and 'Cancel'.

Input the desired name of the new group and select the “Save” button.

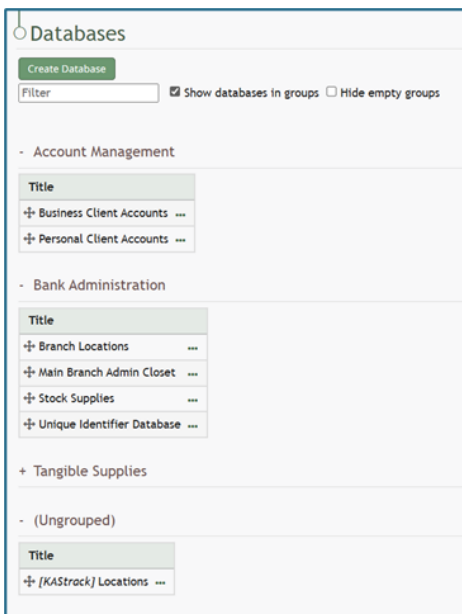

The new group will now show in the Group Table.

When groups have been added to the Database Module, the Database Table on the Home Page is broken into different sections for each group.

To place databases into groups, drag the database group by the directional arrow icon to the left of the Group Name into the desired group table above.
