Unpin a Widget or Speed Dial from the Dashboard

To unpin a widget from the dashboard, go to Dashboard Module and select the specific Dashboard you wish to edit.

Click the vertical triple dot icon in the top right-hand corner of the widget.

Doing so opens a dropdown menu (options on the dropdown menu vary based on the widget type).

Select “Unpin” and the widget will no longer be seen on the dashboard. To add the widget back to the Dashboard, click the Add Widget button at the top right-hand corner of the screen.
