

Reports Module Summary

The Reports Module is where reports are generated, accessed, and stored. Charts based on report data are also managed in this Module. The reports module uses data encapsulated within other KAStack Modules.

The Reports Module contains the Reports Home Page, Charts Page, Manage Reports Page (with Custom Reports and System Reports tabs), and the Settings Page (with a Module Levels tab). Reports are rooted in primary modules. All charts created in KAStack must be generated from a specific report.

Revision #1
